Pull request:	https://github.com/theforeman/foreman/pull/7403	

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1767635

Description of problem:

When a Satellite has many organizations and locations it can be time consuming to search and select the one you want from the context menu.

I would like to be able to enter a name in a search field, and for auto-complete to be supported so that I can search by typing in the first part of the name.

Version-Release number of selected component (if applicable):

Sat6.6

Additional info:

Being able to select by entering the Org and Loc by ID would also be helpful.
