Description

When running db:migrate task, I've seen the following, preventing loading the environment and therefore migrating the database.

the fix is easy, we should ignore locking when checking whether the template is valid, like we do later when saving

Fixes #29008 - consider locked templates valid in seed

When a template is already persisted, it's considered invalid when changed, if it's locked, however seeding should update default template. When we call save, we ignore locking, but we also need to ignore it when checking for errors on few lines above. This is I believe a regression caused by running seed checks.
