Difficulty:		**Fixed in Releases:**	2.2.0	
Triaged:	No	**Found in Releases:**		
Bugzilla link:	1808843	**Red Hat JIRA:**		
Pull request:	https://github.com/theforeman/foreman/pull/7696			

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1808843

Description of problem:

When creating host using satellite 6.6 and deploy on RHV API v4 in the VM tab all the storage domains are displayed when I have only 1 storage domain under the selected data center.

Version-Release number of selected component (if applicable):
RHV 4.4.0-23 engine and hosts (All installed on RHEL 8.2)
Satellite 6.6.1 on rhel 7 using

How reproducible:
Always 100%

Steps to Reproduce:
1. Setup RHV environment with 1 host, data center, cluster, and nfs storage, and network interface
2. Reserved sat66 vm with rhel 7 (rhel7-sat66-4)
3. Add a Compute resource with provider RHV, URL ({server}/ovirt-engine/api/v4)
4. Enable Use APIv4 (experimental)
5. Enter Create Host
6. Select Deploy On Rhev v4 compute resource
7. In the VM tab click on add volume and expand the Storage domain ComboBox

Actual results:
Everything worked until step 7.

In step 7, I see all Storage domains from RHV

Expected results:
In step 7, I should only see the related storage domain to the data center I selected

to Foreman lists unrelated RHV storage domains using v4 API

- Status changed from New to Assigned

- Assignee set to Shira Maximov

This is fixed in fog-ovirt, we'll need to bump the dependency once a new fog-ovirt is released with it.
