Pull request:	
Description A few ideas around VM properties: <ul style="list-style-type: none">• The VM properties (ie, cluster, hypervisor, etc) should be available to hosts (as facts, etc). This would likely be made possible by exposing these properties to the ENC.• The VM properties should be seachable/relational. If this were the case, I could use the search interface to say "show me all hosts on the XYZ hypervisor." I'm not sure the best way to implement something like this.
