<b>Pull request:</b>	<a href="https://github.com/foreman/foreman/pull/7512">https://github.com/foreman/foreman/pull/7512</a>	
<b>Description</b>		
Usecase: We use hostgroups to manage some clusters configuration via puppet. In some cases we need to provide all cluster master members fqdn/ip as a puppet class param value via smart class parameter This can be achieved by using <code>&lt;%= @host.hostgroup.hosts.map {  h  h.name } %&gt;</code>
