

## Foreman - Feature #2937

### Resize hosts table to use more screen width

<b>Description</b>	
The hostgroup column is very narrow by design. Would it be possible for example to have the whole table autoresize to the width of the browser? On a 24" screen about 20% of width is unused.

- Subject changed from *Resize hosts table* to *Resize hosts table to use more screen width*
- Category set to *Web Interface*

#### #2 - 10/16/2013 05:37 PM - Duncan Innes

Would also be nice to be able to:

- 1) alter width of columns by dragging the separator line in the header row
- 2) drag column headers to a view I prefer
- 3) ability to edit the viewed columns (adding further columns would be nice here)
- 4) ability to save my setting so it returns each time my user goes to this screen.

This kind of applies to any page with a table to be fair.

I don't know if we'll use it for sure, but [#4629](#) is about using Patternfly which has a variable width design.
