<b>Description</b>		
Since we manually move file to their correct locations, it happens that they end up in the wrong place. The RPM build then passes but the resulting package is broken. By adding a %check section that requires the gem, this should be prevented in most cases.

Fixes #29424 - %check section for gems with native libs

Since we manually move file to their correct locations, it happens that they end up in the wrong place. The RPM build then passes but the resulting package is broken. By adding a %check section that requires the gem, this should be prevented in most cases.

The EL8 check fails for some unknown reason and needs to be looked into.
