Description

Foreman should be able to create a user filter with wildcards or the 'like' operator. The only operators currently available are standard numeric ones, no 'like' or '~'

Use case:
I am setting multiple foreman users and need to filter the hosts available to them based on hostname. The hostname naming convention in my company is a bit backwards - hostnames are prefixed with the team responsible for it, eg test-server1, dev-server1 etc. What i mean is that a user needs to be restricted to machines called test-* or dev-*, etc.
