Description		
<p>I've got a class called `local_tmpl::app::c2c_sig_demo`.</p> <p>When I want to assign it to a host, I edit the host, go to the "Puppet Classes" tab and type the name.</p> <p>When I type "c2c_sig", it shows up (along with a lot of other classes).</p> <p>If I keep typing and add "c2c_sig_d", only "local_tmpl::app::c2c_sig_dev" shows up, even though it should also match "local_tmpl::app::c2c_sig_demo".</p> <p>This makes it hard to add classes to hosts, since the Puppet Classes section in Configuration allows to add classes to hostgroups, not hosts.</p>
