

## Foreman - Bug #2956

### Autocompletion failure when adding class to host

<b>Description</b> I've got a class called `local_tmpl::app::c2c_sig_demo`.  When I want to assign it to a host, I edit the host, go to the "Puppet Classes" tab and type the name.  When I type "c2c_sig", it shows up (along with a lot of other classes).  If I keep typing and add "c2c_sig_d", only "local_tmpl::app::c2c_sig_dev" shows up, even though it should also match "local_tmpl::app::c2c_sig_demo".  This makes it hard to add classes to hosts, since the Puppet Classes section in Configuration allows to add classes to hostgroups, not hosts.
