#### Description

I'm trying to install and run Smart Proxy within a Docker container which is based on the Foreman Docker container (<https://github.com/theforeman/foreman/blob/2f73d131e7bb3793a2140fd9a36b40c0d4469428/Dockerfile>)

I'm installing Smart Proxy from source by putting the following line into Gemfile.local.rb

```
gem "smart_proxy", :git => "git://github.com/theforeman/smart-proxy.git", :tag => "2.0.0"
```

and calling then

```
/usr/bin/ruby /usr/bin/bundle install
```

Installation seems to succeed.

When I'm trying to execute then

```
bundle exec bin/smart-proxy
```

I'm getting the following error:

```
bash-5.0$ bundle exec bin/smart-proxy
bundler: failed to load command: bin/smart-proxy (bin/smart-proxy)
NameError: uninitialized constant Rabl::ActionView
 /home/foreman/vendor/ruby/2.6.0/gems/rabl-0.14.2/lib/rabl/digestor.rb:2:in `
```

Please bear with me if I'm missing something. I'm new to Foreman, Smart Proxy and Ruby, so pretty much the entire stack.

#### History

#1 - 04/26/2020 09:57 AM - Ewoud Kohl van Wijngaarden

Running the smart proxy in the same container is a very odd thing to do. They are using very different stacks (Rails vs Sinatra). Smart Proxy doesn't have a database while Foreman does. You don't need NodeJS in the smart proxy. I think it's better to use a clean Dockerfile.
