Description

Allow hostgroups to be created from multiple hostgroups giving the ability to create 'profiles' that can be rolled into a hostgroup.

Hostgroup A--\
\
HostGroupC
/
Hostgroup B--/

My thought was to follow the principal of classes can be added to 'profiles' and one or more profiles can be rolled into a hostgroup (node role).

This allows for creating groups of users accounts that can be applied reused in multiple host groups or

Creating a 'profile' for a service that consists of multiple application such as (jboss,mysql and apahce).
