Target version:		
Difficulty:		Fixed in Releases:
Triaged:		Found in Releases:
Bugzilla link:	1557053	Red Hat JIRA:
Pull request:		
Description Currently we have apipie's built in parameter validation disabled in config/initializers/apipie.rb: <pre>Apipie.configure do config config.validate = false end</pre> I think - if our documentation is accurate - then this might be useful.

History

#1 - 09/04/2013 08:28 PM - Dominic Cleal

It turns out there's some history to this:

<https://github.com/theforeman/foreman/commit/5d78633efd6fb9751da1e2776313c0faf22e3978>

It makes sense to rely on AR when we're working directly with AR objects and updating their attributes, but the instance I'm looking at is in the report import action, which uses the parameters more directly, so we miss the validation.
