| <b>Description</b>   |                           |
| Foreman has a setting :ssl_ca_file which is described as:<br><br>SSL CA file that Foreman will use to communicate with its proxies<br><br>In practice Candlepin is almost always the same CA. To reduce the required configuration, it would be good if Katello would fall back to the shared config.<br><br>This may require changes to the description in Foreman. |                           |
