### Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1825268

**Description of problem:**

Assigning location and organization to a role causes a malfunction to the filter function "facts".

**Version-Release number of selected component (if applicable):**

Satellite 6.7.0 and 6.5.3

**How reproducible:**

**Steps to Reproduce:**

1) go to "Administration" -> "Roles" -> create a clone of the role "Ansible Tower Inventory Reader" (role allows user to view facts)
2) assign a location AND an organization to this role
3) create a user named "test1"
4) assign cloned role from step 2 to user "test1"
5) login as user "test1"
6) go to "Monitor" -> "Facts"

**Actual results:**

no data on facts is displayed

**Expected results:**

list of facts should show up

**Additional info:**

Removing location or organization (or both) from role causes that facts show up.
