Pull request:			

Description

A default user with no permissions granted, can view a host and click the 'yaml' option, which will output a rootpw hash. This is not ideal and with the appropriate rainbow tables or similar toolkit could lead to a compromise.

#2 - 09/09/2013 05:20 PM - Dominic Cleal

- Category changed from Web Interface to Users, Roles and Permissions

I think we could improve on this with a dedicated permission for access to password hashes, so they're not readable to other users from either the YAML output or the APIs.
