

Foreman - Feature #30696

Improve the error output in global registration template

08/24/2020 01:19 PM - Marek Hulán

Status: New	
Priority: Low

Pull request:	
Description	
When host is created using the POST /api/hosts in the registration template, we could parse the JSON and present the status in a nicer way. Also if the hostgroup is not assigned to the org/loc we register the host in, we receive ugly error	
<pre>bash: line 2: error:: command not found.</pre>	
we should double check this by another API request and fail gracefully.

IMHO it should return a non-2xx code. When you use curl --fail it will handle it. That will also handle other errors, like HTTP 502 where the Foreman service didn't respond at all. I think curl --fail is widely available for a long time.

I believe this have been fixed in another PR

#5 - 01/29/2021 02:27 PM - Marek Hulán

- Priority changed from Normal to Low

Ok, it's better, currently I'm getting following output

```
ERROR: not_found
Couldn't find Hostgroup with 'id'=3 [WHERE (1=0)]
```

which is not terrible but not great. It's probably based on <https://github.com/theforeman/foreman/blob/develop/app/controllers/concerns/foreman/controller/registration.rb#L51-L61>. I think in this case, we should simply return "ERROR: Host group with id 3 could not be found". So we should specify a custom message, not only based on exception which should be the last resort if there's some uncought exception.

OTOH it's better already and can be considered lower priority.
