Category: API	
Target version: 1.7.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman/foreman/pull/1676	
Description	
It would be great to be able to clone a parent host group and have all children host groups cloned as well. This feature should include matching up puppet classes assigned to each host group as well.	
We have a set of 'template host groups' that are used in the creation of new environments and this would alleviate the burden of having to match up all the classes to the right host group each time.
