Pull request:	
Description	
<p>And ldap_fluff takes the first as "correct result" which is not what we want.</p> <p>We are trying to be too smart about searches.</p> <pre><ldap_fluff>.find_by_dn('CN=Example,OU=Admin Accounts,DC=registry,DC=otago,DC=ac,DC=nz')</pre> is looking for 'CN=Example' in a SUBTREE of 'OU=Admin Accounts,DC=registry,DC=otago,DC=ac,DC=nz' <p>But dn should be an exact match. we should introduce other methods for subtree searches.</p>
