Bugzilla link:		Red Hat JIRA:
Pull request:	https://github.com/theforeman/foreman/pull/8298	

Description

As a user I want to be able to easily automate installation of additional packages at the end of the registration.

New features:

- New Global Parameter `registration_install_packages`
- New snippet `manage_packages`
- New template macro `manage_packages`

Associated revisions

Revision bf56104d - 04/19/2021 02:18 PM - Leos Stejskal

Fixes #31743 - Template macro install_packages (#8298)

For package installation on supported OS families: Red Hat, Debian & Suse.

In host registration users can now install packages by setting the `host_packages` parameter.

Also if a snippet `host_init_config_post` is defined, it gets added to the registration script.
