

Foreman - Bug #31752

[Regression] hammer --output=json produces invalid json

01/29/2021 10:35 AM - Oliver Freyermuth

<b>Pull request:</b>		
<b>Description</b> With any `fact list` query returning more than `entries_per_page` entries, invalid JSON is produced.  Example: ... hammer --output=json fact list --search 'fact ~ network'   less -N ... 5001 } 5002 ] 5003 { ... ... This JSON does not validate and can not be further processed.  Running: ... ... hammer --output=json fact list --search 'fact ~ network' --per-page 100000 ... works.  I did not see this in Foreman 1.21, but see it in 2.3, likely a regression caused by pagination features.
