<b>Target version:</b>	
<b>Difficulty:</b>	<b>Fixed in Releases:</b>
<b>Triaged:</b> No	<b>Found in Releases:</b>
<b>Bugzilla link:</b> 1921453	<b>Red Hat JIRA:</b>
<b>Pull request:</b>	
<b>Description</b> When user access Foreman by different URL than the URL from SSL CA file, registration will fail.	
<b>Steps to reproduce</b> (Foreman instance with set SSL to for example: 'foreman.example.com') <ul style="list-style-type: none"><li>• Go to localhost:3000</li><li>• Generate registration command</li><li>• Run registration</li></ul> Registration fail due to certificate mismatch:  <code>curl: (60) SSL: no alternative certificate subject name matches target host name '10.71.133.16'</code>	
<b>Fix:</b> (Need to confirm) Generate URL from Settings, not from the current URL.
