Target version:				
Difficulty:		**Fixed in Releases:**	2.5.0	
Triaged:	No	**Found in Releases:**	2.1.0, 2.4.0	
Bugzilla link:		**Red Hat JIRA:**		
Pull request:	https://github.com/theforeman/foreman/pull/8427			

Description

In dc0983d58937a064d74d96f311ca10a88569480b (#29642) the example database configuration file always sets a host. Using a host means PostgreSQL can't use ident auth which means you must set a password. By commenting it out, you can simplify the instructions to (on EL but similar on Debian):

```
sudo yum -y install postgresql-server
sudo postgresql-setup --initdb
sudo systemctl enable --now postgresql
sudo -u postgres createuser $USERNAME
sudo -u postgres createdb --owner=$USERNAME foreman
```

Otherwise you need to provide a username/password as well and possibly set that up.

Fixes #32245 - No host by default in database.yml.example

In dc0983d58937a064d74d96f311ca10a88569480b the example database
configuration file always sets a host. Using a host means PostgreSQL
can't use ident auth which means you must set a password. By commenting
it out, you can simplify the instructions to (on EL but similar on
Debian):

```
sudo yum -y install postgresql-server
    sudo postgresql-setup --initdb
    sudo systemctl enable --now postgresql
    sudo -u postgres createuser $USERNAME
    sudo -u postgres createdb --owner=$USERNAME foreman
```

Otherwise you need to provide a username/password as well and possibly set that up.
