Description On CentOS 7.9, with katello 3.18.2-1 and foreman 2.3.3-1. Running hammer role list gives back nothing but the header. While in the gui, navigating to Administer -> Roles shows administrator and user roles active with quite a few locked roles. I've even tried adding --organization-id 1 (for the default) and 3 (for the organization that I created) and still get back nothing. I just want to map the administrator and user roles to LDAP groups, but can't do that if hammer cannot see the roles. Am I doing something wrong?
