

## Packaging - Refactor #32305

### Don't use versioned ruby references in Debian packaging

04/13/2021 09:45 AM - Evgeni Golov

| <b>Description</b>  |   |                                 |
| <p>Debian/Ubuntu ships with <b>one</b> supported Ruby version each release, and that's also the Ruby version we've been historically using on these OSes.</p> <p>However, our packaging still refers to the versioned "ruby2.5" packages and binaries, at no real value.</p> <p>With the inclusion of Ubuntu Focal (and Debian Bullseye) we'd need to replace all these references by ruby2.7.</p> <p>However, I'd prefer our packaging being more OS-agnostic, and thus just refer to "ruby" and let the OS figure out what the default ruby is.</p> |   |                                 |

#### Associated revisions

##### Revision 57f41598 - 04/13/2021 06:51 PM - Evgeni Golov

Fixes #32305 - don't use versioned ruby packages and binaries

we use "the default ruby" of each OS (there are no others), so let's also refer to it as such in our packaging
