Description

The right way to determine the answers file location is to read the scenario file and use the value for :answer_file. However, the script now assumes it's always ${scenario}-answers.yaml which can lead to incorrect behavior.

Fixes #32743 - Correct scenario answers file

The script used to assume it's always ${scenario}-answers.yaml which can
lead to incorrect behavior. The right way to determine the answers file
location is to read the scenario file and use the value for
:answer_file.

It has some safeguard that it could at least determine the path.
