

Smart Proxy - Bug #32915

Transform setting keys to symbols automatically

06/30/2021 11:17 AM - Lukas Zapletal

Description

I do not know why we use the super-weird `:setting: "xyz"` syntax but it is confusing. This is not a typical YAML. It is not a typical UNIX config. It's some kind of Ruby-YAML hybrid.

This patch converts all keys to symbols, we can do a followup puppet update and write all config files without the colons.

For what it's worth, we do the exact same thing in Foreman. It's the result of calling `to_yaml` on a hash with a symbol:

```
[4] pry(main)> puts ({a: 'b'}.to_yaml)
---
:a: b
```

In Python it's part of the string:

```
print(yaml.dump({'a': 'b'}))
:a: b
```
