

## Foreman - Bug #33334

### Create a safe way for users to interact with permissions tables

08/24/2021 03:26 PM - Melanie Corr

| <b>Description</b>  |                           |
| <p>At the moment, we are advising Foreman (and Satellite users) to use foreman rake console.</p> <p>In a recent doc review of this chapter:<br/><a href="https://docs.theforeman.org/nightly/Administering_Red_Hat_Satellite/index-foreman-el.html#sect-Administering-Users_and_Roles-Creating_and_Managing_Roles">https://docs.theforeman.org/nightly/Administering_Red_Hat_Satellite/index-foreman-el.html#sect-Administering-Users_and_Roles-Creating_and_Managing_Roles</a></p> <p>Chapter 5.4.5 suggests installing a Foreman rake console, starting the console, loading it and creating a permissions table.</p> <p><a href="#">@Ewoud Kohl van Wijngaarden</a> suggested that this was extremely dangerous.</p> <p>He went on to say:</p> <p>" If anything, we should create a rake task in upstream and recommend something like foreman-rake permissions:table. "</p> |                           |
