Description		
Since the parsers are in core. It's a good idea to move registering of parsers to a separate component.

Fixes #33419 - Introduce Fact Parser Registry

FactParser class has two purposes in current codebase. It acts as parent for other fact parses (PuppetFactParser, AnsibleFactParser, RhsmFactParser...) and also as a registry for registering parsers for given type/key. This PR introduces FactParserRegistry under Foreman::Plugin namespace. Thanks to that, the FactParser can takes care only for facts!
