Description

I installed a foreman server using foreman-installer, with ansible smart-proxy and ansible running on the same machine, without any puppet configuration inside foreman.
I can import roles and import hosts using the ansible foreman callback.
I can run these roles using jobs and assign a role to the machine if it has no roles assigned.

When trying to access the ansible roles when the machine has roles assigned, I get prompted with the following error:

```
TypeError: Cannot read properties of undefined (reading 'map'),
    in v

    in p
    in h
    in t
    in n
    in a
    in C
    in c
    in div
    in b
```

```
    in IntlProvider
    in I18nProviderWrapper(b)
    in d
    in StoreProvider(I18nProviderWrapper(b))
    in DataProvider(StoreProvider(I18nProviderWrapper(b)))
```

The ansible variables, inventory and jobs section work, but the roles section doesn't

If I need to collect log information / debug info please let me know

```
    in IntlProvider
