Description	
Hello ,	
I have added "Datacenter" plugin in foreman by referring link : https://github.com/theforeman/foreman_datacenter .	
The installation was successful, also able to see all option regarding "Datacenter" plugin but when I try to create "Rack" & "Devices" it shows below error.	
Rack Error : Oops, we're sorry but something went wrong undefined method `correct_position' for #<ForemanDatacenter::Rack:0x000000014093238>	
Devices Error : Oops, we're sorry but something went wrong undefined method `>' for nil:NilClass	
Also attached error images files
