Foreman - Bug #3547

Host appears with a final dot (host.) in Foreman UI when there is no domain

Description

Hi,

We have an anoying issue in Foreman UI concerning hosts without fqdn.
We have a lot of hosts without domain names. So they have just their hostname. These are depending of our customers, some use domains, some still not.

If we have a host without domain, it's appearing in Foreman only with his hostname as long we didn't have apply any configuration in Foreman.
Let's take an exemple, if I sign a new host called "host1", we see it as "host1" in Foreman.
I edit the host and change anything (group, class ...), as soon I save it in Foreman we see the following :
host1 -> like before, but in grey (no report, not member of group ... like a dead host)
host1. -> new appears with a final dot, this one has reports, is member of groups, it's the real one

If we delete the grey one, it's coming back randomly, seems when the agent is running and reports to master

We have the issue since updating to 1.2 (actually 1.2.3) and was not here in 1.1

Seems only related to UI (agents get their catalog, send their report and all is coming to the UI) but really anoying for humans.

Thanks,

Cédric
