Description

as part of [#31593](#)

Kickstart default got a new parameter to both enable Puppet 7 clients at provision time and change the name of the obsolete puppetlabs brand. The work was completed and functional but the update to the header specifying the global parameter for Puppet 7 was missed, which means unless you know the parameter is there by reading the snippet code in more detail, you'll only have the ability to continue to install Puppet 5 or 6 clients

```
- enable-puppetlabs-repo: boolean (default=false)
- enable-puppetlabs-puppet5-repo: boolean (default=false)
- enable-puppetlabs-puppet6-repo: boolean (default=false)
```

This bug is to track the update of the header to document correctly the Puppet 7 parameter
