Description		
At least on EL8 it's possible to use PROFILE=system for SSLCipherSuite and SSLProxyCipherSuite. This allows admins to configure the cipher suite on a system level and it also means we don't have to keep our cipher suite up to date.

Revision 8472875d - 10/24/2022 04:26 PM - Ewoud Kohl van Wijngaarden

Fixes #35629 - Default Apache to PROFILE=system ciphers

At least on EL8 it's possible to use PROFILE=system for SSLCipherSuite and SSLProxyCipherSuite. This allows admins to configure the cipher suite on a system level and it also means we don't have to keep our cipher suite up to date.

Today SSLProxyCipherSuite is not yet an option, but Hieras will ignore unknown keys. When the option becomes available, it will be set.

Revision 899eea85 - 10/28/2022 01:31 PM - Ewoud Kohl van Wijngaarden

Refs #35629 - Use built in Apache defaults on EL

Currently unreleased, but puppetlabs/apache will respect the EL8 defaults. It follows the system level configuration for TLS protocols, which out of the box is TLSv1.2 & TLSv1.3.

It still keeps stricter security on Debian since there the default still allows TLSv1.1 and some sub-optimal ciphers.

Revision ed50daee - 10/28/2022 02:36 PM - Ewoud Kohl van Wijngaarden

Refs #35629 - Switch back to puppetlabs/apache releases

8.3.0 was released with the features we need.
