I've tested this on Foreman 1.5 and believe the issue has been resolved. A basic user with create_hostgroups, edit_hostgroups and edit_classes (from "Host class") permissions on a role is able to create a host group with classes, and assign classes to an existing group.

We're running a test period for the new auth system in Foreman 1.5, so if you have opportunity to test it, your feedback would be appreciated. More info at [Auth testing for Foreman 1.5](#).

should be fixed with 1.5+
