Description

The ability to see the kickstart script associated to a host with the spoofing mething is great, but it's a bit bothersome to have to type in the url manually.
Would it be possible to add a button when you enter build mode that would take you to the same page as the spoofed kickstart script for that specific host?

On the host page, click the Templates tab on the left and there's a "Review" icon next to each template which links to the spoof template. Is that what you wanted?

Yes, that's exactly what I wanted. Geez, I had no idea that there, it's sort of well hidden. :)
Thanks for pointing it out, that's great!
