Pull request:		
Description Hello, after upgrading to Foreman 3.5.0 our installations of Rocky Linux 9 are failing. After investigating further, this is due to recent changes in the "Kickstart default" template which changed the tool used for katello registration from subscription-manager to rhsm. However, rhsm seems to be not available, and thus the registration is failing. I assume the same behavior applies for all "rhel_compatible" distributions which are not RHEL directly.
