Description

Greetings!

I stumbled upon this little bug when trying to log out from Foreman.
When manually typing the logout URL (https://<your foreman server FQDN>/users/logout), and after clicking on "Yes" for the logout, I'm being redirected to a localhost page for the logout, so no logout operation performed.

I'm aware it's not the easiest / most natural way to log out, but I though that I would let you know since I saw it!

How to reproduce: copy and paste the logout URL to a browser, then hit "Yes".

Regards
