It might be useful to link directly to the download URL for the package on the UI.

Distribution URLs for the Content view repositories is also not shown on the UI anywhere even though those distributions are browsable for the user. We should put that link somewhere on the UI for debugging purposes.

Grant confirmed that "pulp_rpm distributions are always DIST-BASE/Packages/first-letter/list-of-packages"

We can create direct links to packages with that relative path.
