Foreman - Feature #3623

Use Puppet's autosign approver command instead of editing autosign.conf

Description

Thanks to https://projects.puppetlabs.com/issues/7244 in Puppet 3.4, an autosign_cmd can now be defined which approves or denies certificate requests. We could optionally use this on new Puppet versions as a slightly more secure or powerful version of the autosign.conf support used today.

Docs on the new setting:
