Pull request:	
Description	
<p>We use rescue blocks in actions like here</p> <pre>post "/dns/" do fqdn = params[:fqdn] value = params[:value] type = params[:type] begin dns_setup({:fqdn => fqdn, :value => value, :type => type}) @server.create rescue Proxy::DNS::Collision => e log_halt 409, e rescue Exception => e log_halt 400, e end end end</pre>	
<p>Instead we should use error handler http://www.sinatrarb.com/intro.html#Error%20Handling at least for specific exceptions to be more DRY. We should add custom exceptions where needed.</p>
