<b>Pull request:</b>	<a href="https://github.com/Katello/katello/pull/10597">https://github.com/Katello/katello/pull/10597</a>	

#### Description

Cloned from [https://bugzilla.redhat.com/show\\_bug.cgi?id=2170917](https://bugzilla.redhat.com/show_bug.cgi?id=2170917)

#### Description of problem:

On Katello 4.5, the only way to change the redhat\_repository\_url is when the CDN configuration is set to "Custom CDN".

However, there are specific use-case where some users need to use a different mirror URL to fetch our content. When using the custom cdn configuration to make this change, access to our mirror is denied because katello won't use certificates to try establishing a connection.
