Foreman - Bug #3649

Hosts need validations of compute attributes

11/14/2013 02:41 PM - Tomáš Strachota

Pull request:			

Description

There are currently no validations of compute attributes. Misconfiguration usually causes either general 500 or usage of the default values without notifying the user. The same applies to network interfaces and volumes.

We need to validate the input and give users better hints of what went wrong.
