Description		
<p>Hi, I try to create a manual script for install foreman in automatic mode. A simple script liked: #!/bin/bash</p> <pre>foreman-installer \ --foreman-proxy-dns=true \ --foreman-proxy-dns-managed=true \ --foreman-proxy-dhcp=false \ --foreman-proxy-dhcp-interface=eth0 \</pre> <p>but where and how can I configure all the variable of foreman in this script? thanks</p>

Sorry, I don't understand your question. Customise what the foreman installer does by passing arguments like you're doing - they're all documented here: <http://theforeman.org/manuals/1.3/index.html#3.2.2InstallerOptions>
