Description

Hi, I try to create a manual script for install foreman in automatic mode.
A simple script liked:
#!/bin/bash

foreman-installer \
--foreman-proxy-dns=true \
--foreman-proxy-dns-managed=true \
--foreman-proxy-dhcp=false \
--foreman-proxy-dhcp-interface=eth0 \
.....

but where and how can I configure all the variable of foreman in this script?
thanks

Sorry, I don't understand your question. Customise what the foreman installer does by passing arguments like you're doing - they're all documented here: http://theforeman.org/manuals/1.3/index.html#3.2.2InstallerOptions
