

## Smart Proxy - Bug #36632

### Ubuntu deployment via Smart Proxy fails due to outdated Userdata API

<b>Description</b>	
<p>Smart Proxy has not the latest Userdata API endpoint compared to Foreman.</p> <p>In Foreman, it allows a template/Ubuntu host to reference a MAC-based API endpoint for the userdata interface:</p> <p><a href="http://example.foreman.com/userdata/&amp;lt;MAC&amp;gt;/&amp;lt;user-data files&gt;">http://example.foreman.com/userdata/&amp;lt;MAC&amp;gt;/&amp;lt;user-data files&gt;</a></p> <p>AND the prior API:</p> <p><a href="http://example.foreman.com/userdata/&amp;lt;user-data files&gt;">http://example.foreman.com/userdata/&amp;lt;user-data files&gt;</a></p> <p>But, the latest Smart Proxy forwards only the "prior" API to Foreman and doesn't forward the MAC-based requests to Foreman. It has been added in this commit: <a href="https://github.com/theforeman/foreman/commit/46ca3e70847d36613d78b099dd69511e3a3bd4fa">https://github.com/theforeman/foreman/commit/46ca3e70847d36613d78b099dd69511e3a3bd4fa</a></p> <p>We need a similar change for Smart Proxy: The current Ubuntu Provisioning templates rely on this API endpoint which breaks Ubuntu host provisioning via the Smart Proxy.</p>
