

## Foreman - Bug #37013

### Changing the "Show New Host Overview Page" setting is not applied even after reloading the page

#### Description

Cloned from [https://bugzilla.redhat.com/show\\_bug.cgi?id=2253519](https://bugzilla.redhat.com/show_bug.cgi?id=2253519)

#### Description of problem:

After changing the value of 'Show New Host Overview Page' setting, "Reload Current Page" button in web browser does not work to reflect the changed host overview page

**How reproducible:** Always

#### Steps to Reproduce:

1. Navigate to Satellite WebUI -> Administer -> Settings -> change the value of 'Show New Host Overview Page'. For example: Set it to 'No' if it is currently 'Yes' OR set it to 'Yes' if it is currently 'No'.  
(Lets say I am changing it from 'No' to 'Yes')
2. Go to Satellite WebUI -> Hosts -> All Hosts page. Still the old host overview page is displayed.
3. Reload the page multiple times using web browser reload button.

**Actual results:** Still the old host overview page is displayed even after reloading the web browser page multiple times.

**Expected results:** Reloading the page using web browser button should change the old host overview page to New Host Overview Page.

Workaround-

Go to any other option, for example: Satellite WebUI -> Configure -> Host Groups. Now navigate back to Satellite WebUI -> Hosts -> All Hosts page and the old host overview page has been changed to New Host Overview Page.

"Reload Current Page" button in web browser does not help to reflect the changed host overview page. After changing the value of 'Show New Host Overview Page' setting, user have to navigate to any other option in Satellite WebUI (for example: Satellite WebUI -> Configure -> Host Groups) to get the changes reflected in Host Overview Page.

#### Associated revisions

**Revision 0b40a64b - 01/16/2024 08:44 PM - Ron Lavi**

Fixes #37013 - change the 'All hosts' menu item's url based on the `new\_host\_page` setting

After changing the `new\_host\_page` setting, the layout navigation still has the wrong hosts page link (the one it got initially) and someone who wants to try this new functionality can't access the page via the navigation.

Using ForemanContext, in this PR we are updating the menu item based on the changed setting.
