Foreman - Feature #3705

Use Puppet parameter cadir to find PuppetCA

Pull request:			

Description

The proxy does not use the puppet parameter cadir in the puppet.conf. It uses the parameter ssldir to find the ca directory. When you onyl move the ca to a different directory and configure puppet with the cadir parameter, the proxy still searches in the "old" directory.

It would ne nice, if the foreman-proxy uses the parameter cadir if it exists in the puppet.conf.

- Status changed from New to Rejected

not really possible with the current proxy design (and highly unlikely to change)
