### Description

The tarball that foreman-proxy-certs-generate creates applies gzip compression, which implies the file extension needs to be .tar.gz instead of .tar.

This is done in https://github.com/theforeman/puppet-certs/blob/c1eaa9087a654d3a1bd5584bd9f3e9f2fff6119e/manifests/tar_create.pp#L25 and dates all the way back to when the file was created in 2013.

### Associated revisions

**Revision 6fe95b33 - 01/25/2024 01:46 AM - Ewoud Kohl van Wijngaarden**

Refs #37097 - Use .tar.gz file extension for tarballs

This aligns with the actual content, which is a gzipped tarball.

**Revision 1a3e4258 - 02/13/2024 12:41 PM - Ewoud Kohl van Wijngaarden**

Fixes #37097 - Use automatic compression based on file path for tar

This way users can pass .tar.xz to get XZ compression too. One side effect is that by default we won't compress anymore since the file extension is .tar. On the other hand, it's less confusing for users that you have a .tar extension which should be .tar.gz.
