Target version:	Katello 4.13.0		
Branch:		**Pull request:**	https://github.com/Katello/katello/pull/10902
Difficulty:		**Fixed in Releases:**	
Triaged:	Yes	**Found in Releases:**	
Bugzilla link:		**Red Hat JIRA:**	

Description

https://github.com/Katello/katello/blob/master/app/lib/katello/resources/candlepin/upstream_job.rb#L7 hard codes the rhsm url. This makes it impossible to run this operation in a stage environment without changing the url in this file.
Better alternative will be something along having an env variable like RHSM_REDHAT_API_URL. The user then set its value the service file similar to

```
# cat /etc/systemd/system/foreman.service.d/override.conf
[Service]
Environment=RHSM_REDHAT_API_URL=https://<stage rhsm>/subscription
```

and the default being the present default.
RH Cloud has a similar strategy to help with the qe env

https://github.com/theforeman/foreman_rh_cloud/blob/foreman_3_9/lib/foreman_inventory_upload.rb#L54-L57
